SUMMARY

iOS Developer with 4 years of experience developing, enhancing, and maintaining enterprise-grade mobile applications using Swift, UIKit, SwiftUI, Combine, and Swift Concurrency. Experienced in delivering large-scale transit and fintech solutions, including National Capital Region Transport Corporation(NCRTC) Namo Bharat Connect platform and Delhi Metro connectivity features, involving QR ticketing, payment gateway integrations, RESTful APIs, real-time communication, offline data persistence, secure authentication, and App Store deployments.

Strong expertise in MVVM architecture, modular application design, Core Data, WebSockets, performance optimization, debugging, code reviews, Agile methodologies, SDLC processes, release management, and cross-functional collaboration with product, QA, and backend teams.

TECHNICAL SKILLS

Languages: Swift, Objective-C, Java, C++

Frameworks: UIKit, SwiftUI, Combine, Swift Concurrency, AVFoundation

Architecture: MVVM, MVC, Clean Architecture, Modular Architecture, VIPER, Dependency Injection

Networking: REST APIs, URLSession, Async Await, URLSessionWebSocketTask, Alamofire, OAuth, SSL Pinning

Storage: Core Data, Realm, UserDefaults, Keychain

Mobile Features: Push Notifications, Deep Linking, Universal Links, Background Tasks

Testing: XCTest, Unit Testing, UI Testing

Debugging: LLDB, Memory Graph Debugger, View Hierarchy Debugger

Performance: Instruments, Time Profiler, Leaks, Allocations, Energy Log

Tools: Git, Firebase, Crashlytics, TestFlight, App Store Connect, Jira, Figma, Postman, Proxyman

PROFESSIONAL EXPERIENCE

Bahwan Cybertek, Bengaluru: iOS Developer SOFTWARE Engineer Aug 2022 – Present

- Implemented MVVM architecture with dependency injection by separating networking into dedicated service layers, keeping ViewModels lightweight and ViewControllers focused on UI presentation.
- Designed generic networking abstractions using URLSession, async/await, and Codable, minimizing duplicated request logic across multiple APIs.
- Implemented thread-safe asynchronous workflows using Swift Concurrency (Task, async let) and Combine, ensuring responsive UI updates during concurrent network operations.
- Designed image caching using NSCache and URL response caching with URLCache, reducing repeated downloads and improving screen loading performance.
- Implemented offline ticket storage and retrieval using Core Data, enabling seamless access to booked tickets without network connectivity.
- Investigated complex production issues using LLDB, Xcode Memory Graph, and Instruments, resolving retain cycles, excessive allocations, and UI rendering bottlenecks.
- Improved networking reliability through retry strategies, request cancellation, timeout handling, and structured error propagation.
- Managed production releases through TestFlight, App Store Connect, provisioning profiles, certificates, and phased deployment strategies.

- Participated in architecture discussions, sprint planning, code reviews, and implementation of scalable iOS solutions following coding standards.

PROJECTS

NCRTC Nam0 Bharat Connect Delhi Metro Integration (App Store)

Aug 2022 – Present

Large-scale transit application for NCRTC enabling QR-based ticket booking for Nam0 Bharat and Delhi Metro travel, fare calculation, station discovery, real-time train tracking, and end-to-end commuter journey planning.

- Developed Ticket Booking, Fare Calculation, Train Tracking, and Route Planning modules using UIKit and MVVM.
- Implemented QR ticket generation, validation, and offline storage using Core Data.
- Integrated Easebuzz payments, OAuth authentication, SSL Pinning, and Keychain storage.
- Developed a local payment callback caching mechanism to persist transaction states and reconcile payment status after network recovery, ensuring ticket consistency.
- Developed REST API-based real-time train status and commuter information features.
- Optimized performance and resolved production issues using Instruments and Crashlytics.
- Developed unit tests using XCTest, improving code reliability and maintaining test coverage for critical business workflows.

Da Money (App Store)

Sep 2024 – Nov 2024

Fintech platform delivering real-time market analytics, stock insights, and AI-powered financial recommendations.

- Developed Portfolio Management, Market Analytics, and Financial Insights modules using UIKit and MVVM.
- Implemented real-time market updates using URLSessionWebSocketTask.
- Built reusable networking layers using Async Await and generic API handling.
- Developed analytics dashboards and optimized UI performance for live data updates.

Shakuten Video Streaming Platform (GitHub)

March 2026 – Present

Open-source SwiftUI video streaming application demonstrating modern iOS architecture, media playback, and scalable networking.

- Developed reusable networking layers using URLSession, async/await, and generic API handling to improve scalability and maintainability.
- Leveraged Swift Concurrency (Task, async let, TaskGroup) to execute asynchronous operations and parallel API requests efficiently.
- Integrated AVFoundation for media playback and processing, while utilizing AsyncSequence and actor-based patterns for handling asynchronous events and state management.

EDUCATION

Bachelor of Technology in Electronics and Communication Engineering

2018 – 2022

Rungta College of Engineering and Technology
